

as I have been involved Two Way Radio since 1990.

I have seen a lot of inefficiency

#1 Large portion Frequency are allocated to old technology hardly nobody use.
if you see spectrum in Spectrum analyzer , one will quickly realize most are unused space.
those unused frequencies should be open to public and newer technology such as WIFI,
cellular Data service.

#2 Currently, Frequency are divided up with Usage and Purpose such as audio, TV
broadcasting, two way radio.
by removing those restriction on How the certain Frequency band are used will increase
efficient use.

Solution:

#1 stead of licening each usage , FCC should give blancket usage allowance in those unsued
frequencies, without requiring special permit.
